MedlinePlus Quality Guidelines

MedlinePlus is designed to help you find appropriate, authoritative health information. To do this, we provide access to information produced by the National Library of Medicine and the National Institutes of Health, such as searches of MEDLINEplusMed, our database that indexes medical research literature, and ClinicalTrials.gov, the database of research studies from the National Institutes of Health. We also provide you with a database of full-text drug and supplement information, an illustrated medical encyclopedia, a medical dictionary, interactive health tutorials, and the latest health news.

In addition, MedlinePlus contains pages that link to other Web sites. For example, we have Health Topic pages on about 700 diseases and conditions from Alzheimer's Disease to West Nile Virus. We focus on organizing the full-text publications produced by the NIH and its associated other Federal Government organizations. We also link to other Web sites. The quality guidelines we use in evaluating links to Web pages are listed below.

- **Quality, authority and accuracy of health content**
 - The organization's mission must relate to the goals of MedlinePlus.
 - The organization must provide accurate, science-based information that complements or enhances the government information found on MedlinePlus.
 - The source of the content is established, respected and dependable. The organization publishes a list of advisory board members or consultants on the site.
 - The information provided is appropriate to the audience level, well-organized and easy to use.
 - MedlinePlus links to original content. MedlinePlus does not link to information reproduced from other Web sites.
 - Lists of links are evaluated/reviewed/quality-filtered.
- **The primary purpose of the Web page is educational and not to sell a product or service. Most content is available at no charge.**
 - MedlinePlus requires a clear differentiation between content and advertising. There should be an advertising policy on the site.
 - MedlinePlus will exclude or organizations and Web resources if presentation or content could lead a reasonable user to infer endorsement of products or services.
 - MedlinePlus provides links to directories to help you find health professionals, services, and facilities. NLM does not endorse or recommend the organizations that produce these directories, or the individuals or organizations that are included in the directories.

Evaluating Internet Health Information: A Tutorial from the National Library of Medicine

- This tutorial teaches you how to evaluate the health information that you find on the Web. It is about 16 minutes long.
- You need a Flash plug-in, version 6 or above, to view it. If you do not have Flash, you will be prompted to obtain a free download of the software before you start.
- The tutorial runs automatically, but you can also use the navigation bar at the bottom of the screen to go forward, backward, pause, or start over.

MedlinePlus Guide to Healthy Web Surfing

What should you look for when evaluating the quality of health information on Web sites? Here are some suggestions based on our experience.

Consider the source—Use recognized authorities

Know who is responsible for the content.

- Look for an "about us" page. Check to see who runs the site: is it a branch of the Federal Government, a non-profit institution, a professional organization, a health system, a commercial organization or an individual.
- There is a big difference between a site that says, "I developed this site after my heart attack" and one that says, "This page on heart attack was developed by health professionals at the American Heart Association."
- Web sites should have a way to contact the organization or webmaster. If the site provides no contact information, or if you can't easily find out who runs the site, use caution.

Focus on quality—All Web sites are not created equal

Le condizioni per partecipare a MedlinePlus...

Go Local
MedlinePlus's Go Local project links MedlinePlus users to health services in their local community and directs users of the Go Local site to MedlinePlus health topics. For example, users get medical information on diabetes from MedlinePlus and then visit a Go Local site for nearby health programs, services and providers. The user experience for Go Local is that each MedlinePlus health topic links to relevant local services on the Go Local site. Go Local sites receive this user traffic from each MedlinePlus health topic and route it to a page listing matching Go Local records or to a page explaining the site contains no matching local services. To see how these links work, choose a Go Local area from the pull-down list or map link on any MedlinePlus health topic page.

Background
The University of North Carolina at Chapel Hill (UNC) developed the first Go Local site, NC Health Info (<http://www.nchealthinfo.org>). Since it debuted in February 2003, additional areas have become publicly available Go Local areas (see <http://www.nlm.nih.gov/medlineplus/goLocal/index.html>), and more are under development.

For background on Go Local, please see The NLM-Hosted Go Local System: An Opportunity for Medical Libraries (PDF, 1.4 MB) at <http://www.nlm.nih.gov/medlineplus/goLocal/docs/nlmhostedsystem.pdf> (January 2004)

Alcune condizioni-chiave per partecipare a MedlinePlus...

Accepted participants begin and launch on an agreed-upon schedule. If you have other questions not answered here, please submit the form at <http://www.nlm.nih.gov/go/medlineplus/feedback.html> and be sure to include "Go Local" in the subject line. There is also a *Go Local Participants Discussion List* with searchable archives at <http://list.nlm.nih.gov/archives/implus-golocal.html>

Here are some key questions to ask. Do you have:

- An institutional commitment to create and continue the site?
- At least a half-time salaried person to coordinate the project?
- Staff to do outreach and publicity?
- Staff to index and maintain the local records with the vocabulary and geographic mapping?
- Staff to handle customer questions?
- An existing Web site or database to serve as a starting point?

Funding
One time grants of up to \$25,000 per Go Local project are available from the National Network for Libraries of Medicine for full network members. These funds do not take the place of the requirement for
